## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. No. 6,161,995 (Wakazono et al., hereafter '995) in view of US Pat. No. 5,564,483 (Sacchi, hereafter '483).

Regarding claims 7, 10, 12 and 14, '995 teaches a work processing method and apparatus including horizontal spindle (main shaft) horizontally separated from a vertical rotation support shaft (inherent) for rotating the rotatable table 212 which holds worktable 211 having a lateral rectangular shape in the plan view (see figure 13 and col. 12, lines 1-13, for example).

'995 does not disclose the specific limitations of the slanted side of the workpiece table as claimed.

'483 teaches a workpiece table with a rectangle shape in the plan view and a right angled triangle in a top view (see figure 1) fitted with work grip rotation feed mechanism portion 13 to opposite ends of a slant surface portion (see figure 1).

Regarding claims 7, 8 and 10, Examiner notes that the work support axis of the work grip rotation feed mechanism is separated from an axis of the vertical rotation support shaft depending on the location of the rotation of the workpiece and table.

Art Unit: 3722

Regarding claims 9, 11 and 13, as can be seen in figure 1 of '483, the incline of the stand is at least 15 degrees.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify machine tool with a generic worktable 211 with a lateral rectangular shape in the plan view as taught by '995 with the specific worktable (see figure 1 of '483) as taught by '483 for the purpose of utilizing a plurality of worktables incorporated about a single element thus realizing a compact and safe structure such as will allow also of minimizing down times (see '483, col. 2, lines 23-39, for example).

### ***Conclusion***
